1. Wooden Poles

SIZES:
2.0M | 2.5M | 3M | 3.5M | 4M | 4.5M | 5M | 5.5M | 6M

Our wooden poles are custom made for stretch tents.

These perfectly crafted stretch tent poles are designed and developed to add the charm and a wooden organic look, as well as to perform the ultimate rigging solution.

They are lightweight and are engineered to meet international regulations.

Wooden poles can be fitted with a steel cap or optional eye nut attachment solution.

All tent poles are fully treated varnished and are finished with rope for easy handling.

2. 50mm Pole Caps (Beige/Black/White)

Our pole caps are designed and developed and are an exclusive product.

They are made from a PVC that is indestructible and look very professional.

Adding them to the tops of the poles, where the pole touches the canvas, it allows for a cushioned finish protecting the stretch tent from potential tears and look amazing!

4. Pole with a 2-Way Steel Cap Fitting

The 2-way steel cap is handy for double attachment points for more technical installations. These can be used on wooden or aluminium poles.

3. 76mm Pole Caps (Beige/Black/White)

Our pole caps are designed and developed and are an exclusive product.

They are made from a PVC that is indestructible and look very professional.

Adding them to the tops of the poles, where the pole touches the canvas, it allows for a cushioned finish protecting the stretch tent from potential tears and look amazing!

5. Pole with a 4-Way Steel Cap Fitting

The 4-way steel cap is great when you need multiple attachment points for more technical installations. These can be used on wooden or aluminium poles.

6. Aluminium Pole

76MM (3MM WALL THICKNESS)
76MM POLE CAP (COMES IN WHITE/BLACK/CHINO)

The aluminium poles are a great structural solution when installing a Bedouin stretch tent. They are used for the support system.

There are three pole solutions available: aluminium, wooden and bamboo.

Aluminium is recommended as they are joinable and light to transport.

9. Aluminium Pole Joiners

AVAILABLE IN:
76MM | 50MM

The big advantage with aluminium poles is they are joinable and collapsible using our custom made pole joiners to fit both the 50mm and 76mm poles.

7. Pole with Foot Cap / Foot Stoppers

SIZES:
50MM | 63MM | 76MM

The foot caps are designed to fit the aluminium poles to give a flush, neat finish and to protect the installation surface from the poles. They also offer extra traction on a surface.

The custom designed foot stopper has many applications but is primarily designed to be added to the end finish of our aluminium poles. This creates a soft surface for the pole when resting on wood and vulnerable surfaces.

10. Rope Burner

The Rope Burner cuts and cauterises rope to do away with frayed and unravelling ends.

8. Aluminium Pole with 2-way or 4-way Steel Cap

76MM(3MM WALL THICKNESS)
50MM (3MM WALL THICKNESS)

Aluminium pole with steel cap fitting. The steel cap fitting is an accessory added to a wood or aluminium pole to add a rigging attachment. They are a tight and comfortable fit, look professional and are engineered to handle a high load.

11. Pole Sock for Aluminium Poles

MADE TO SIZE AND COLOUR

Our poles can be adapted to have a custom coloured pole sock finished to your colour of choice for a slick finish, made to size and order.

12. 10mm Nickel Plated Carabiner

The nickel-plated carabiners are an industry standard when installing a stretch tent. They are used while tensioning the tents and connections of ropes to tents, etc.

They are an essential tool for attaching tents and rope accessories together and are used for tensioning.

15. Rebar Stake / Peg with Hook

SIZES:
32MM X 1500MM IN LENGTH - RIGGING PEG
32MM X 1200MM IN LENGTH - RIGGING PEG
25MM X 750MM IN LENGTH
25MM X 1000MM IN LENGTH

The 900mm pegs are used for the downlines and smaller tents for pegging into the ground to create attachment points.

The 1200mm rigging pegs are used for larger tents on the corners or the downlines on larger tents. These pegs are handy when installing on soft turf areas.

The shorter 750mm long pegs are designed for side wall applications.

13. Polyester Braid / Rope

SIZES:
8MM POLYESTER BRAID 1.4 TON BREAKING STRAIN
13MM POLYESTER BRAID 4 TON BREAKING STRAIN

Our custom ropes are specifically designed and developed for stretch tents installations. The rope is available in black or white as a standard but can be made a choice of colour on large orders.

The 8mm is specifically used to tension the tent from pole to peg. With multiple loops one can use the 8mm rope to maximum benefit. It's an industry standard as a tensioning method.

The 13mm circumference rope is woven through the perimeter of the tent and used for tensioning purposes. If you want to rig like a pro use a circumference rope!

16. Peg Covers

The peg cover is a great solution to use as a protection method when installing a stretch tent. One simply places them over the pegs to demarcate them and they come in matching colours.

14. Rebar Stake / Peg with Hexnut

1200MM x 32MM | 750MM x 25MM
1500MM x 32MM | 1000MM x 25MM

Our Dome Top Rebar Stake is a riggers dream!

They are perfect for your triangular corner base plates and any soft soil rigging. The 32mm thickness gives it that extra hold in the ground. The dome top is perfect for stakes Wacker Machines as well.

17. 25kn Rated Screw Gate Carabiner

Our 25kn Rated Screw Gate Carabiners are also a riggers dream. They can hold over two tons of weight and are perfect for big tent rigging and circumference ropes.

This carabiner is also perfect for clipping on to corner base plates for peace of mind that your tent is 100% secure. It's simply a good all round bit of rigging kit to have.

18. Rubber Handle Sledgehammer

Our preferred sledgehammer is ideal for hitting in pegs. The rubber handle absorbs the shock allowing for use over long periods. The short length makes it easy to maneuver, no matter the space restrictions.

21. Base Plate

The base plate is a support mechanism used once the stretch tent is installed and assists with stabilising the tent. The king poles are simply fastened to the base plate and the base plate to the ground. In situations where the pole may lose tension and collapse, the plate maintains the tension and rigidity.

19 Peg Puller

Our Dimensions Tents peg puller is essential when it comes to removing pegs. Once you have used it you won't want to be without this useful, robust tool.

22. 7mm Profile | 11mm Profile

7MM PROFILE | 11MM PROFILE

The wall profiling was designed and developed by Dimensions Tents to fasten our Bedouin stretch tents to walls and hard surfaces to create a waterproof join. By fitting the profile flush with the wall one can then slide the dimensions custom finished stretch tent into the profile during installation.

- The 11 mm profile works with a 10mm insert
- The 7mm profile works with a 6mm insert

20. Pole Handle

Our custom-designed pole handle is a great tool for raising the poles during the installation process. It allows one to hold onto the pole firmly as well as being able to raise the pole during installation. It's an essential tool for professional installations and comes in a pair.

23. Ground Sheet

It is important to use a ground sheet as a protection method when installing a stretch tent. You lay the sheet down and then the tent on top during the installation process to ensure that the tent remains clean and does not get damaged by rough surfaces. Once you have installed the tent the sheet is removed.

When taking down the tent its important to use the sheet again during de-rigging.

24. Downline Ratchet Tensioning Kits

INCLUDES COLOUR MATCHING RATCHET HEAD COVER.

We have developed a tensioning method between poles and pegs to create the ultimate tension. This replaces the traditional rope tensioning method.

27. Bucket Bag

We have two bag options for our stretch tents and side walls. The tent drops into the bag and is an easy fit making transporting of your tent a breeze. The bag is waterproof, so they are ideal for tent storage too!

25. Ratchet Kit with Storm Straps

AVAILABLE IN ASSORTED COLOURS TO MATCH YOUR TENT

The storm strap kits are a definite must for safety when thrown over a tent after installation. It applies pressure on the tent for safety purposes. Its essential for downward pressure during stormy days.

Includes:

- Ratchet head & cover
- Webbing (covered) made to size
- D Shackle

In an easy to store clear PVC bag.

28. Repair Kit

Our repair kit is a handy option to have when a tent is damaged. All the essential tools are included for easy application and a professional repair job.

26. 3-Way Stretch Tent Bag

AVAILABLE IN ANY COLOUR

Our colour matching 3-way tent bag is easy to use when returning your stretch tent to its bag.

100% waterproof for maximum protection during storage, designed for an easy parkway and storage solution and fully brandable.

29 Megabond Repair Glue

Our custom developed repair glue was designed for easy repair to tents.

It is easy to use and easy to apply which makes repairs a simple task. Ask for application advice prior to use.

30. Pallet Crate 1200mm x 1000mm

This is the perfect bit of kit for storing and transporting stakes and other bits of rigging gear.

Ideal for pallet tucks and forklifts! They can be stacked on top of each other to maximise storage space. It's a warehouse manager's best friend!

33. Chemical Anchor

The chemical anchor is a fastening solution to create attachments on wall surfaces for brick, concrete, marble and rock.

It's a dream solution as you simply drill a hole, clean the surface, add the chemical anchor and insert the fixture (thread bar and m12 eye nut or Rawl expansion bolt).

Once it sets it is ready for tension.

31. Rigging Plates

**SIZES:
SMALL & LARGER CORNER**

The small and large plates are used for rigging in soft soil conditions. The plates are installed with multiple pegs and can take attachments for tension. This makes rigging a luxury. These are used together with Hex pegs and a base plate jack to remove the peg.

34. D Shackle

10mm | 12mm

The D Shackle is an essential attachment system when installing a stretch tent. They are used for attaching storm straps to pegs as well as used in permanent installations.

32. Base Plate Jack

The Base Plate Jack is an awesome bit of kit that allows you to lift your corner plates enough to get the heads of your stakes out the ground to enable one to put your stake puller around them. This makes it so much quicker and easier when striking jobs.

35. Cleaning Solution

We have developed our own eco-friendly cleaning solution that is easy to use, affordable, PH friendly and is safe to use on all tents.

36. Crank Arm for Role Upside Walls

For permanent installations, the Dimensions Tents custom crank arm is the perfect accessory to roll up sidewalls with ease.

39. Wall Mounted Steel Post with 45° Bend on the Top (100x100)

THESE ARE AVAILABLE IN 2.25M LENGTHS AND 3.75M LENGTHS.

The all mounted steel post can be adjusted to 2.5m and 3m length.

With the customised brackets they can be mounted and fixed to walls to ensure a neat rigging finish on those tight areas where conventional poles with guide ropes can't fit.

37. Bottom Ground Mounted Steel Post (100 x 100)

The bottom section of our steel posts have wings at the bottom to ensure no movement once the post is sunk into the ground.

40. Turn Buckle

10mm | 12mm

The turn buckle is especially handy when installing shade canopies and smaller tents for permanent solutions. It offers a great tensioning method.

42. 10mm Coach Bolt and Fisher Plug

Not all bolts are made equal! Our coach bolts are the ideal size and strength to install wall profiling.

38. Top Ground Mounted Steel Post (100 x 100)

The top section of our 100x100 ground mounted steel post has a nice 45 degree bend to ensure good tension for permanent installations.

These come in 3.5m lengths and 4 m lengths .They are sunk into the ground to a depth of 1.5 m to provide 2.5m and 3m permanent rigging posts.

41. M10 & M12 Eye Nuts | Rawl Expansion Bolts

These are used for creating attachments on hard surfaces. They are fastened to the surface and then the tent is attached to these.
